
1-Rescuer Infant CPR Sequence

1-Rescuer Infant CPR Sequence

Follow these steps to perform 1-rescuer CPR on infants:

Step	Action
1	Check the victim for a response. If no response, shout for help.
2	If someone responds, send that person to activate the emergency response system.
3	Open the victim's airway.
4	Check the victim's breathing (take at least 5 seconds and no more than 10 seconds).
5	If no breathing, give 2 breaths.
6	Check the victim's pulse (take at least 5 seconds and no more than 10 seconds).
7	If no pulse, or if heart rate is less than 60 beats per minute with signs of poor perfusion, perform cycles of compressions and ventilations (30:2 ratio).
8	After 5 cycles, if someone has not already done so, activate the emergency response system.
