

2-Rescuer Infant CPR Sequence

Follow these steps to perform 2-rescuer CPR on infants:

Step	Action
1	Check the victim for a response.
2	Send the second rescuer to activate the emergency response system.
3	Open the victim's airway.
4	Check for breathing (take at least 5 seconds and no more than 10 seconds).
5	If no breathing, give 2 breaths.
6	Check the victim's pulse (take at least 5 seconds and no more than 10 seconds).
7	If no pulse or if heart rate (pulse) is less than 60 beats per minute with signs of poor perfusion, perform cycles of compressions and ventilations (30:2 ratio). When the second rescuer arrives, use a ratio of 15:2 with the 2 thumb-encircling hands technique.
